

Bespoke Structures for

Sports and Leisure

Why Spaciotempo?

When you choose Spaciotempo, you're choosing a trusted partner with the expertise to deliver high-quality sports structures quickly, efficiently and with minimal disruption. From concept to completion, we work alongside you to ensure a smooth and successful project.

Experience

Backed by over 50 years of industry experience, the Spaciotempo team specialises in delivering bespoke sport buildings and canopies that meet the demands of complex sites.

Collaborative approach

Collaboration is at the heart of our approach. From initial discussions and site visits through to procurement and project delivery, we work alongside your team to understand your challenges and recommend the most effective solution for your needs.

A name you can trust

Spaciotempo UK delivers more than just nationwide building supply and installation, offering personalised project management and face-to-face support every step of the way, at a level that suits your needs.

Spaciotempo from start to finish

We are the only UK supplier of temporary and semi-permanent buildings to manufacture and install our own structures. This means we can also invest in innovation and training to ensure we are providing the best solution for our customers at all times.

Experts in your industry

Spaciotempo has a proven track record in the sports and leisure sector, providing bespoke building solutions for all facilities ranging from permanent covers for padel courts to temporary swimming pool structures.

Customer satisfaction

A large volume of our business is from repeat customers. In a survey of our customers, 100% of them would recommend Spaciotempo as modular building manufacturers to a colleague or friend and use Spaciotempo again.

Benefits of a Spaciotempo sports structure

Choosing a Spaciotempo structure is a versatile and cost-effective way to create high-quality covered space for your sports facility. Whether you require a temporary, semi-permanent or long-term building solution, our structures can be tailored to meet your needs. From expanding existing facilities and increasing year-round participation to accommodating growing demand, we provide practical solutions designed around your requirements.

Rapid Installation

With minimal ground works required, you can have your building up and running quickly – often in a matter of weeks. Because Spaciotempo is the only UK supplier of temporary and semi-permanent buildings to manufacture, install and maintain our own structures, we are fully accountable – giving you extra re-assurance.

Cost Effective

The cost of developing a new sports facility can be a significant challenge, particularly when budgets are under pressure. Spaciotempo sports structures provide a cost-effective alternative to permanent construction, delivering high-quality covered sports space at a fraction of the cost. With flexible leasing options available, even large-scale facilities can become a viable and affordable investment.

Versatile

Whether you opt for an “off the shelf” standard sized structure, or a bespoke solution, we are able to offer a wide range of options for lighting, heating, cooling, walls and floors tailored to your application. If you need sprung flooring, court markings or changing facilities & showers, we can provide this too.

Durable

Although we refer to our structures as “temporary”, for many of our customers they are a very durable solution to a permanent requirement. All of our buildings are calculated to meet British Safety Standards, Wind Loading BS6399 and General Snow Loading BS6399, the same as for permanent buildings – and some have been in use for more than 25 years.

In 2016, the University of Nottingham embarked on a £40 million project to create a state-of-the-art sports centre, requiring the demolition of its existing facilities. To ensure students retained access to sports amenities throughout the two-year development, Spaciotempo was commissioned to design and deliver a bespoke 3,000m² temporary sports complex.

The key challenge was to provide a comprehensive facility capable of accommodating the university's diverse sporting activities, while being fully operational within a five month timeframe. This included planning, groundwork and construction, with the finished facility required to meet high standards of safety, functionality and comfort.

Spaciotempo delivered the project as a complete turnkey service, undertaking the necessary groundwork and drainage works and supplying all structural elements, flooring, electrical systems, heating and fixtures. This approach allowed the

university to delegate the entire project to a single contractor, simplifying delivery and coordination.

Completed on time and within budget, the temporary sports complex provided uninterrupted sporting facilities throughout the redevelopment, ensuring student activities and programmes could continue without disruption. The project demonstrated how temporary structures can provide a high-quality, fully functional solution during major construction and redevelopment programmes.

"The temporary sports complex represents the first stage in what is a huge project for us. Spaciotempo came up with a plan that followed our brief and they've showed a positive, flexible attitude throughout. They provided an all-encompassing service which was a massive bonus for us. It meant we were able to delegate the entire project, and have now simply taken delivery of the keys."

Dan Tilley – Director of Sport, University of Nottingham

PADEL COURTS

THREE COURT COVER &
RECEPTION ANNEX: 840M²

ATHLONE, IRELAND

NEIVALU

Planet Padel required a robust, weatherproof facility capable of supporting uninterrupted, year-round play, while providing a more efficient alternative to the delays, costs and complexities of traditional construction. To meet this need, Planet Padel partnered with Spaciotempo to deliver a fast, flexible, and future-ready structure. We designed, supplied, and installed a 24m x 35m custom building, providing full cover for three padel courts. A welcoming 5m x 5m reception annex was also added to enhance the player experience from the moment they arrive.

To ensure the courts could operate in comfort throughout every season, the structure features an insulated thermo roof that provides excellent temperature regulation and protection from the elements. Combined with full Eurocode compliance, the building is engineered to withstand Ireland's harshest snow and wind conditions—making it a truly year-round padel hub built for both performance and durability.

The structure's 40mm insulated sandwich panel walling, finished in a sleek Goosewing Grey, not only enhances thermal efficiency but also delivers a clean, modern aesthetic that reflects the professionalism of the facility. The reception annex, highlighted with a bold Corten Steel finish, adds a distinctive visual contrast and a welcoming touch for visitors. Premium glazed personnel doors and an insulated roller door ensure secure, effortless access while maintaining the high insulation standards throughout—underscoring Spaciotempo's commitment to quality, functionality, and design excellence.

The result is a state-of-the-art padel hub that positions Planet Padel as a leading destination for one of Europe's fastest-growing sports. With a smart, insulated design and a sleek finish that complements their brand, Planet Padel now offers players a premium experience—rain or shine.

Case Study

Barrio Padel approached Spaciotempo seeking a solution to provide all-weather play across four padel courts. The facility needed to maintain a bright, airy environment that would blend sympathetically with its iconic setting, while providing a robust alternative to more traditional sports structures.

Following discussions and proposals from several providers, Barrio Padel selected a Spaciotempo semi-permanent canopy with canvas sides for added weather protection, recognising the durability and reliability of the product. Spaciotempo supplied and installed a 30m x 50m x 8m structure, complete with custom canvas sides for enhanced weather protection.

Incorporating the bespoke sidewalls presented a particular challenge, as they are not a standard feature of Spaciotempo's canopy structures. The team developed a tailored solution that provided additional protection from the elements while retaining the bright, open atmosphere required by the client.

The build was delivered in just four weeks, including installation of the canvas sides. This provided a significantly faster alternative to traditional construction while minimising disruption to activities at the National Water Sports Centre.

The completed facility provides four covered premium padel courts within a modern, attractive environment that supports year-round play.

Rather than simply seeking a contractor, Barrio Padel was looking for a trusted partner capable of supporting its wider ambitions. Spaciotempo worked closely with the client to understand both the practical requirements of the facility and the companies vision. The success of the project has led to continued discussions regarding future padel developments at additional locations across the UK, supporting Barrio Padel's mission to bring high-quality padel facilities to more communities nationwide.

GYM & FITNESS CENTRE

10M X 30M ON A 4M EAVE

RAWTENSTALL, LANCASHIRE

NEIVALU

Thrive Gym required additional space to expand its fitness facilities and create a dedicated boxing arena for the local community. The new facility needed to accommodate two boxing rings, training equipment and professional sporting events, while providing a durable, energy-efficient solution that could connect seamlessly to the existing gym.

Spaciotempo designed and installed a 10m x 30m semi-permanent structure, providing 300m² of additional training space. Completed in just four days, the facility offered a rapid, cost-effective alternative to traditional construction while minimising disruption to the gym's operations.

Constructed with 40mm steel-clad sandwich panel walling, the building provides the durability and insulation benefits associated with permanent construction. Thrive Gym chose to hire the facility, with ten-year lease payments expected to be around one-third of the cost of a traditional build, delivering significant long-term savings.

The clear-span design enabled two professional lighting rigs to be installed without height restrictions, while thermo blackout roof covers provided control over natural light levels. The facility was also equipped with an electric roller shutter door, personnel exit and external guttering.

The completed facility provides a purpose-built boxing and training environment, giving Thrive Gym the additional capacity to expand its offering and deliver enhanced facilities for its members.

"I couldn't fault the operations team; they were diligent and worked extremely fast whilst maintaining the highest level of professional standards throughout. Spaciotempo stayed in contact all the way through, and you could tell that they genuinely cared about the project. With the additional space afforded to us, our members will reap the benefits of the boxing training facility for years to come."
